Project
Page

Motivation

What action is the **bipolar** performing?
 Then, what action is the **tool used by the operator's right hand** performing?
 Does this VLM really look at the image...?

Overview of SurgCheck Pipeline

- Using Endoscopes-SG201 dataset, entity names that act as linguistic hints are replaced with generic words via four cues (red box, red arrow, spatial position, periphrasis) to make less-biased questions.
- We evaluate performance on original vs. less-biased QAs, and use the gap to diagnose each model's linguistic reliance.

Experimental Results
